#### ABSTRACT

In a toy garbage transportation truck comprising a cargo space (3) for the garbage that is to be disposed of, having an opening (4) on its rear to which an emptying casing (5) for garbage cans that are to be emptied is adjoined that has a rear discharge opening (7), provision is made that

the floor (9) below the discharge opening is curved approximately in the shape of a segment of a circle,

the floor (9) transitions into a slanted feeding surface (10) that extends to below a feeding opening (6),

a conveyor shovel (12) is disposed above the floor (9),

the conveyor shovel (12) can be swiveled along the floor (9) above the same, lifted parallel to the slanted feeding surface (16) to at least the lower edge of the feeding opening (6) and subsequently swiveled back and lowered to reach the end of the floor (9) on the opening side and repeat the conveyor movement again.
